

## SOLUTIONS CLOSE TO HOME SUIT SPACERIGHT

For over 112 years, Spaceright Europe has been at the forefront of the research, design and manufacture of products for the education sector. Best known for its comprehensive range of educational furniture including the invention of the revolving rollerboard back in 1904, Spaceright products have been used in schools, nurseries and offices both in the UK and overseas over the last century.

Operating from manufacturing facilities just outside Glasgow and also in Lincoln,

the company has grown rapidly, particularly during the last two years through the acquisitions of Edtech and Millhouse, which have enabled it to expand its offering of furniture and early years products.

Spaceright's Michelle Killen was eager to find a reliable quality supplier for the 40 or so metal components used in the production of their furniture. Previously the company had bought these from a supplier in the south east of England, but now wanted to have the convenience of a source closer to its Glasgow base.

Being only 45 minutes away, EMF's Livingston workshop met the 'local' criteria, and as Spaceright had previously used a few EMF components via a third party, Michelle already knew that she could expect a high standard of workmanship from the firm and decided to request prices and samples for production of the fully fabricated and finished parts she needed.

Having early on established a great working relationship with Spaceright, EMF now supplies the company on an on-going basis. We provide Michelle and her team with daily updates and quotes and as new products come along, we occasionally get involved in some of the design aspects of the job as well.

**"EMF offers us a truly comprehensive range of services and is close enough for us to visit should the need arise."**

**—Michelle Killen,  
Spaceright Europe Ltd**
